## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Deakin (4279243), which shows all of the claimed limitations. Deakin shows a

solar powered energy system (see at least fig. 1) comprising:

a framework 19 having a pair of opposite side sections

joined at their distal ends respectively by a pair of end sections (see at least fig. 1);

a central cavity 13,14 defined between said side sections and said end sections;

a fluid conducting means 18,20,22 mounted on said framework and occupying said central cavity;

a solar collector 9 mounted on said framework in fixed, parallel, spaced-apart relationship;

a blackened layer (see at least col. 4, lines 1-5) disposed in said central cavity between said fluid conducting means and said solar collector; an insulation layer 15 disposed in said central cavity engaging said fluid conducting means on a side of said fluid conducting means opposite to its side in said spaced-apart relationship with said solar collector (see at least fig. 2); and said side sections and said end sections of said framework provided with a plurality of receptacles 17 opening into said central cavity for insertably receiving and retaining said solar collector, said blackened layer, said fluid conducting means and said insulation layer so as to provide a unitary construction.

### ***Allowable Subject Matter***

3. Claims 6-11 are allowed.
4. Claims 2-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
